BitDam

The only solution stopping unknown content-borne threats at first sight.

Protects enterprise email, cloud drives and instant messaging from malicious files and links.

Ransomware | Malware | Phishing | Data Breach

>20% of unknown content-borne attacks go undetected.

Leading security products such as Office 365 ATP and G Suite Enterprise miss 20-40% of the unknown content-borne threats during the first 24-48 hours. Secure Email Gateway, Sandboxing, and other cyber security solutions turn ineffective as attackers use automation to constantly create unknown variants of malware.

Despite the significant investments made by organizations to protect their Email, Cloud Drives, and Instant Messaging against malicious files and links, they are still exposed to unknown cyber threats delivered on a daily basis.

Traditional protection is no longer sufficient. A new approach is needed to meet the full range of cyber threats contained in any type of file or URL.

Stop unknown threats.

BitDam stops known and unknown content-borne threats contained in any type of file or URL at their source, pre-delivery, blocking malware without hurting end users' experience.

Unmatched detection rates.

BitDam's detection rates of advanced threats are 10X higher than current solutions, covering malware of all types, including hardware and logical exploits, N-Day and Zero-Day attacks.

Forever protected applications.

Exposure to malware, even while waiting for the next security update, may be devastating. BitDam stops content-borne threats for both known and unknown vulnerabilities from the first sight, making response time irrelevant. No more security updates and patches. No more exposure to malware.

Make all channels safe to click.

BitDam secures content across all enterprise collaboration channels - email services by any vendor, cloud storage and file sharing services, instant messaging and more - all in one place.

Email

Secure Microsoft Office 365, G-Suite or any other e-mail service to protect your employees from malicious emails.

Cloud storage and file sharing

Protect Microsoft OneDrive, Sharepoint, Google Drive, Dropbox, Box or any other cloud drive, to ensure that end users access only legit files.

## Chat and Instant Messaging

Make your enterprise Instant Messaging a safe zone using BitDam for Slack, Skype, Teams, Zoom and other chat platforms.

Secure Collaboration

Safe to Click

Deployed within minutes.

BitDam solutions are cloud ready and easily integrate with any security solution, collaboration channel, email and chat provider, through a simple set of APIs.

Deployed outside of your network, it requires no changes to existing security infrastructure, policies, or processes, allowing rapid and smooth rollout.

Set-up takes just a few minutes thanks to built-in integration with Office 365, G-Suite, DropBox, OneDrive, Slack and others.
The BitDam Dashboard makes day-to-day operations fluent and intuitive, helping SOC teams to view, monitor and investigate malware with a click.
Focus on legit applications.

Instead of chasing previous and ever-evolving cyber threats, BitDam focuses on how your business applications should behave, thereby detecting when they are being exploited.

All enterprise applications protected

BitDam covers all standard business applications. It protects against advanced attacks aimed at MS office files, pdf, ics, zip, and rar files, as well as website links.

CPU-level application learning, alien code detection

BitDam knowledge base maps application code paths and legitimate run time operations. Full visibility of CPU level data enables detection and blocking of alien code flows, evasive techniques and threats, at their source.

100% attack-agnostic

Independent of past knowledge, BitDam is attack-agnostic by nature. As such, it blocks malicious files and links regardless of the specific attack or manipulation they may contain.

About BitDam

Protecting hundreds of thousands of mailboxes, BitDam's Advanced Threat Protection is used by leading organizations in Europe and the US, with a proven record of detecting threats that other security solutions fail to uncover.
The company was founded by veterans of an elite cyber unit of the Israeli Intelligence Forces with a strong background in offensive cyber.
